AMENDMENT TO THE CLAIMS

No amendments to the claims have been made. For the convenience of the examiner, a copy of the claims is presented:

1-25: (Canceled)

- 26. (Previously Presented) A method for treating hemorrhoid disease in a human in need thereof, comprising administering to said human an effective amount of a pharmaceutical composition, said composition consisting essentially of a thrombolytic protein selected from the group consisting of tissue-type plasminogen activator (t-PA), urokinase (u-PA), streptokinase (SK), or a combination thereof, wherein the pharmaceutical composition is administered rectally.
- 27. (Previously Presented) The method according to claim 26, wherein the pharmaceutical composition consists essentially of recombinant streptokinase and a pharmacologically acceptable diluent carrier or excipient.
- 28. (Previously Presented) The method according to claim 26, wherein the recombinant streptokinase has a concentration of 50,000 to 1,500,000 IU per gram of the pharmaceutical composition.
- 29. (Canceled)
- 30. (Canceled)
- 31. (Canceled)
- 32. (Cancelled)
- 33. (Previously Presented) The method according to claim 26, wherein the pharmaceutical composition is a suppository.

- 34. (Previously Presented) A method for treating hemorrhoid disease in a human in need thereof, comprising administering to said human an effective amount of a pharmaceutical composition, said composition consisting essentially of a thrombolytic protein selected from the group consisting of tissue-type plasminogen activator (t-PA), urokinase (u-PA), streptokinase (SK), or a combination thereof, and ethylenediaminetetraacetic acid (EDTA) and sodium diclofenac, wherein the pharmaceutical composition is administered rectally.
- 35. (Previously Presented) A method for treating hemorrhoid disease in a human in need thereof, comprising administering to said human an effective amount of a pharmaceutical composition, said composition consisting essentially of a thrombolytic protein selected from the group consisting of tissue-type plasminogen activator (t-PA), urokinase (u-PA), streptokinase (SK), or a combination thereof, and ethylenediaminetetraacetic acid (EDTA) and sodium salicylate, wherein the pharmaceutical composition is administered rectally.
